DATE: July 20, 2016

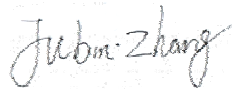

FCC ID: 2AE6CER9000U1

IC: 20125-ER9000U1

Model: ER9000U1

1. The digital repeater demodulates the signals received at a carrier frequency according to the DMR protocol, and then modulates and transmits the signals via another carrier frequency.
2. The amplifier will transmit the signals after amplification.
3. The amplification mechanism of the digital repeater is different from that defined in FCC KDB 935210 D02.
